

FONOCOST S1

SINGLE-LINE CALL LOGGING SYSTEM

Reduce costs and avoid abusive usage of your phone!

Call Logging

FONOCOST S1 registers for each call:

Date and Time

Duration

Number dialled and cost of outgoing calls

Ringing time of incoming calls

Call Barring

FONOCOST S1 restricts the use of the phone:

Barring specific destinations

Allowing a maximum cost per call

Call Billing

FONOCOST S1 is a powerful bill-back device:

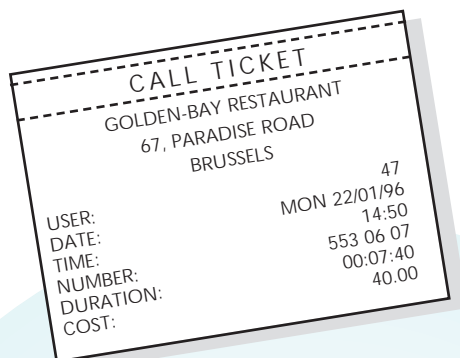

Billing each call independently or several calls at a time

Allowing pre-payment and assigning credits

Allocating costs to different users

FONOCOST S1

MAIN FEATURES

MULTIPLE USERS

Multiple users of the same phone line may be provided with up to 99 different access codes. Prior to dialling the number, access code should be entered to charge calls accordingly. Separate reports and bills may be obtained for each access code.

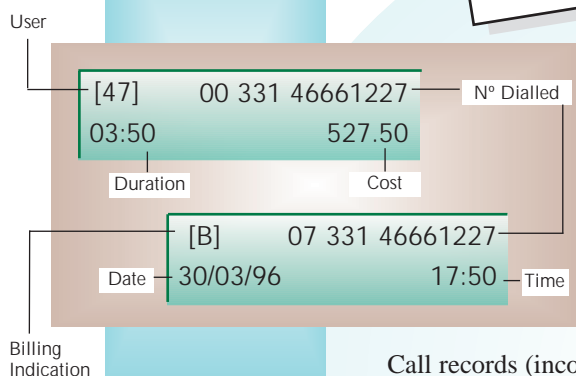

STATISTICS

FONOCOST S1 provides cumulative information on the calls made during a complete calendar year, in the form of totals of cost and number of calls (outgoing, incoming, unanswered), on a day-by-day basis, or for any period of time.

SECURITY

FONOCOST S1 may be equipped with batteries which provide an actual usage autonomy of two hours of conversation in case of a mains failure. In addition, its built-in Ni-Cd rechargeable battery maintain data and configuration in memory for at least 4 weeks. Any attempt to disconnect the unit either from the mains or from the telephone line is detected and recorded.

Example of Display showing details of an outgoing call

CALL LOGGING

Digits appear on the display as they are dialled. During the call, duration and cost are displayed in real time.

Call records (incoming and outgoing) are stored in memory and may be displayed or printed at any time. Calls may be selected according to the following criteria: date, time, cost, call type, destination, and user number.

CALL BARRING

Access may be barred to specific programmable destinations. A maximum call cost may equally be defined so that the call is disconnected when reaching the specified cost.

Limitations may be bypassed through a special password on the telephone keypad.

CALL BILLING

FONOCOST S1 may be programmed to issue a ticket* for each call. In case several calls are billed to a single user, Billing Mode may be set to provide one ticket only, showing details and cost of individual calls.

Moreover, if neither the Auto-Ticket nor the Billing Mode have been programmed, the system allows for manually billing any call in memory, by simply viewing it on the display, and pressing the <TICKET> key.

FONOCOST S1 produces reports of cash status and keeps track of staff shifts.

A personalized header may be programmed to appear at the top of each ticket.

TECHNICAL SPECIFICATIONS

- **Dimensions:** 12 x 20 x 6 cm.
- **Gross Weight:** 1,5 Kg. approximately.
- **Power:** 220 VAC, or 3 batteries of 1,5 V.
- **Connection:** In series with the telephone line.
- **Memory:** 300 or 1200 detailed calls, daily totals for 1 year.
- **Cost-calculation:** Meter-pulse detection (12/16 Khz, 50 Hz), or according to duration and destination.
- **Options:** - Integrated thermal printer, 24 columns.
- Serial port for connection to external devices (PC, printer).

*Model with printer only.
